

Algorithm for User Authentication

Step 1: Create User Feedback spring starter project

Step 2: Import necessary dependency in pom.xml

Step 3: Apply Db configuration in application.properties

Step 4: Create Pojo class (User.java)

Step 5: Create Repo interface extend JpaRepository (User.java)

Step 6: Create Service class (UserService.java)

Step 7: Create Controller class (UserController.java)

Step 8: Test Using JUnit Test Case[in my case jupiter]- (UserServiceTest)
